LangGraph Conversion Workflow

SOURCE-PRESERVING

Agentic Converter / Python worker orchestration

01 Capture

- Capture pages and assets — `crawl_site`
- Check capture coverage — `sitemap_gate`
- Extract content evidence — `extract_content`

02 Infer Structure

- Identify content candidates — `infer_candidates`
- Infer relational schema — `infer_schema`

03 Human Review

- Approve or request revision — `schema_review_gate`
- Version the approved schema — `mint_schema_version`

Workflow pauses while approval is pending.

Revision requested

Approved

04 Prepare

- Check generation approval — `generation_gate`
- Prepare the application scaffold — `prepare_template_scaffold`

05 Generate

- Backend and database — `generate_backend`
- Source-preserving frontend — `generate_frontend`
- Content management admin — `generate_admin`

06 Validate And Package

- Check artifact consistency — `validate_consistency`
- Build and runtime smoke tests — `validate_build_smoke`
- Review validation results — `validation_review_gate`
- Mark package approved — `package_export`

RETRY PATHS Capture retry / schema revision / targeted regeneration (bounded budgets)

Terminal failure: END_CANCELLED | Successful package: __end__ | Preview and ZIP download are separate API actions.
